
SEALLESS STEEL STRAPPING TOOL CH 47

MANUAL.
ONE TOOL OPERATION.
TENSIONS, SEALS, CUTS.

CH 47

One tool - Manual tensioning, sealing and cutting for flat surfaces without metal seal.

OPERATION

Ergonomic design and balance means little effort is needed for tensioning and sealing the strap.

Both straps are inserted into the sealing area. Tension and sealing is achieved with lever action. Top strap is cut with the sealing action. The result is a triple notch seal (as shown below) that is more efficient than the traditional metal seal.

FEATURES

The open construction permits fast and simple access to the tool parts. Wearing parts can be replaced by the operator. Only a few manipulations are required to adapt another strap width or thickness. A single tool for all screws. High tension capacity – 650 kg

DATA

CH47

Weight	3.5kg
Joint type	3 punches in strap layers
Tension	650kg
Strap width	13,16,19mm
Thickness	0.38mm – 0.63mm
